Cooperation

Sustainable resource management

The cooperation model (PPP)

Transfer of knowledge Establish a platform together with the parties in the agreement and develop cooperation projects

Best available technologies Bring in BAT technologies and solutions from Scandinavian Cleantech Industries

Project initiatives Work with private and public end users to develop sustainable resource management projects

Cleantech industry development
Cooperate in the development of local supply chain and business development

The partnership

- Initiate trade development related to food industry, health care and tourism
- Exchange of students and academic cooperation
- Develop best practice environmental and renewable energy initiatives and projects.
- Exchange of experiences and study tours addressing best practices in waste management
- Bring R&D institutions in the two regions together for joint new initiatives

On going cooperation

- Exchange of students and academic cooperation programs between the Lublin University of Technology and Telemark University College.
- Joint entrepreneurship efforts and projects in middle school level
- Support renewable energy projects utilising local sources for CHP production
- Pilot project, automated system for beverage containers
- R&D cooperation in renewable energy, CO₂ capture and storage and industry efficiency
